                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Xaa equals any of the naturally occurring L-amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Xaa equals any of the naturally occurring L-amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                             RESULT 40

US-10-012-542-160

is Sequence 160, Application US/10012542

patent No. 6627741

i GENERAL INFORMATION:

APPLICANT: Ruben et al.

TILLE OF INVENTION: 94 Human Secreted Proteins

FILE REFERENCE: E2029F1

CURRENT APPLICATION NUMBER: US/10/012,542

CURRENT APPLICATION NUMBER: EARLIER APPLICATION NUMBER: 09/461,325

PRIOR APPLICATION NUMBER: EARLIER APPLICATION NUMBER: 60/089,507

PRIOR PILING DATE: BARLIER FILING DATE: 1998-06-16

PRIOR FILING DATE: BARLIER FILING DATE: 1998-06-16

PRIOR PILING DATE: BARLIER FILING DATE: 1998-06-16

PRIOR PILING DATE: EARLIER FILING DATE: 1998-06-16

PRIOR APPLICATION NUMBER: EARLIER APPLICATION NUMBER: 60/089,510

SUMMARIES

## Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Asolate solution of the disulphide bridge arrangement of bovine (fragments)
NyAlternate names: autorosette inhibition factor
C;Species: Bos primigenius taurus (cattle)
C;Date: 19-Mar-1993 #sequence\_revision 23-Mar-1995 #text\_change 07-Jul-1995
C;Accession: S35687; JC2196; A60488
R;Sorensen, C.B.; Krogh-Pedersen, H.; Petersen, T.E.
FEBS Lett. 328, 285-290, 1993
A;Title: Determination of the disulphide bridge arrangement of bovine histidine-rich glyc
A;Reference number: S35687; MUID:93351678; PMID:8348977
A;Accession: S35687
A;Accession: S35687
A;Molecule type: protein
A;Residues: 1-25;26-52;57-75;82-88;95-119;146-173;175-206;210-309;313-445 <SOR>
A;Note: 355-Gln and 368-Tyr were also found
R;Halkier, T.; Andersen, H.; Vestergaard, A.; Magnusson, S.

S14983
extensin class I (clone w10-1 L) - tomato (fragment)
C;Species: Lycopersicon esculentum (tomato)
C;Species: Lycopersicon esculentum (tomato)
C;Accession: S14983
R;Showalter, A.M.; Zhou, J.; Rumeau, D.; Worst, S.G.; Varner, J.E.
Plant Mol. Biol. 16, 547-565, 1991
A;Title: Tomato extensin and extensin-like cDNAs: structure and expression in response to A;Reference number: S14970; MUID:91329690; PMID:1714316
A;Accession: S14983
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-130 <SHO>
A;Cross-references: EMBL:X55694
A;Cross-references: EMBL:X55694
C;Keywords: cell wall; glycoprotein; hydroxyproline
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                hypothetical protein APE1531 - Aeropyrum pernix (strain K1)

pyroglutamyl-peptidase I (EC 3.4.19.3) - Bacillus amyloliquefaciens
N;Alternate names: 5-oxoprolyl-peptidase; pyroglutamyl aminopeptidase
C;Becies: Bacillus amyloliquefaciens
C;Bate: 10-Jun-1993 #sequence_revision 10-Jun-1993 #text_change 09-Jul-2004
C;Accession: JX0244
R;Yoshimoto, T.; Shimoda, T.; Kitazono, A.; Kabashima, T.; Ito, K.; Tsuru, D.
J. Biochem. 113, 67-73, 1993
A;Title: Pyroglutamyl peptidase gene from Bacillus amyloliquefaciens: Cloning, sequencing
A;Reference number: JX0244; MUID:93203177; PMID:8095933
A;Reference number: JX0244
A;Molecule type: DNA
A;Residues: 1-215 <YOS>
A;Cross-references: UNIPROT:P46107; DDBJ:D11035; NID:g216315; PIDN:BAA01791.1; PID:g21633
C;Superfamily: pyrrolidone-carboxylate peptidase (N-terminal pyroglutamyl peptidase)
C;Keywords: hydrolase; omega peptidase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Myb26 protein - garden pea
C; Species: Pisum sativum (garden pea)
C; Date: 23-Apr-1999 #sequence_revision 23-Apr-1999 #text_change 09-Jul-2004

S50686
hypothetical protein YER183c - yeast (Saccharomyces cerevisiae)
C; Species: Saccharomyces cerevisiae
C; Date: 28-May-1993 #sequence_revision 24-Feb-1995 #text_change 09-J
C; Accession: $50686
R; Dietrich, F.S.
submitted to the EMBL Data Library, December 1994
A; Description: The sequence of S. cerevisiae cosmids 9163 and 9132.
A; Reference number: $50431
A; Reference number: $50431
A; Residues: 1-211 < DIE>
A; Cross-references: UNIPROT: P40099; EMBL: U18922; NID:g603405; PID:g6

"The structure of the alpha-galactosidase gene loci in Thermus
brocklanus ITI360 and Thermus thermophilus TH125.";

Extremophiles 4:23-33(2000).

-I- CATALYTIC ACTIVITY: UDP-glucose + alpha-D-galactose 1-phosphate
alpha-D-glucose 1-phosphate + UDP-galactose.

-I- PATHWAY: Galactose metabolism; second step.

-I- SIMILARITY: Belongs to the galactose-1-phosphate
uridylyltransferase family 1.

C -I- CATALYTIC ACTIVITY: UDP-glucose + alpha-D-galactose I-phosphate

C -I- PATHWAY: Galactose metabolism; second step.

C -I- SIMILARITY: Belongs to the galactose-I-phosphate

-I- SIMILARITY: Belongs to the galactose-I-phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2:547-553(2004).

VITY: UDP-glucose + alpha-D-galactose 1-phosphate te 1-phosphate + UDP-galactose.

Ctose metabolism; second step.

Clongs to the galactose-1-phosphate emily 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         uridylyltransferase family 1.

systematic review.";
Genome Biol. 3:RESEARCH0083.1-RESEARCH0083.22(2002).
-!- FUNCTION: Appears to regulate regional development of specific tissues. Can rescue axis polarity in UV-radiated Xenopus embryos.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- TISSUE SPECIFICITY: In early embryo development, expression confined to two regions; a horseshoe-like pattern across the dorsal side which is destined to form the brain hemispheres and a second domain which invaginates inside the stomodeum and which, is fated to form the foregut, ring gland and stomatogastric nervous system (SNS).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Reinert K., Remington K., Saunders R.D.C., Scheeler F., Shen H., Shue B.C., Siden-Kiamos I., Simpson M., Skupski M.P., Smith T., Spier E., Spradling A.C., Stapleton M., Strong R., Sun E., Svirskas R., Tector C., Turner R., Venter E., Wang A.H., Wang X., Wang Z.-Y., Wassarman D.A., Weinstock G.M., Weissenbach J., Williams S.M., Woodage T., Worley K.C., Wu D., Yang S., Yao Q.A., Ye J., Yeh R.-F., Zaveri J.S., Zhan M., Zhang G., Zhao Q., Zheng L., Zheng X.H., Zhong F.N., Zhong W., Zhou X., Zhu S., Zhu X., Smith H.O. "Plasma protein map: an update by microsequencing.";

Electrophoresis 13:707-714 (1992).

"In the physiological function is not yet known. It binds heme, dyes and divalent metal ions. It can inhibit rosette formation and is known to interact with heparin, thrombospondin, and the lysine-binding site of plasminogen. On the basis of its homology with HMW kininogen, the His-rich region of this protein may mediate the contact activation phase of intrinsic blood coagulation cascade.

Elochemistry 35:1925-1934(1996).
Elochemistry in cand function is not yet known. It binds for interact with heparin, thrombospondin, and the lysine-binding site of plasminogen. On the basis of its homology with HMW kininogen, the His-rich region of this protein may mediate the contact activation phase of intrinsic blood coagulation cascade.
Elochemistry in plasma.
Elochemistry in addition to having a high His and Pro content, this protein has many internal repeats. 15 tandem repetitions of a 5-residue sequence (G[H/P][H/P]PH, consensus) form a His/Pro-rich
                                                                                                                                                                         Oryctolagus cuniculus (Rabbit).

WPI; 2002-666989/71

New histidine-proline rich glycoprotein (HPRG) polypeptide, useful for diagnosing or treating diseases associated with undesired cell migration, invasion, proliferation, or angiogenesis, e.g. cancer, atherosclerosis.

Claim 2; Page 67; 82pp; English.

The present sequence is a specific example of claimed anti-angiogenic pentapeptides of the invention. Claimed anti-angiogenic polypeptides or peptides comprise: the histidine-proline-rich (H/P) domain of human histidine proline rich glycoprotein (HPRG, see ABB79806); an H/P domain of rabbit HPRG (see ABB79807); a variant of these that is capable of inhibiting angiogenesis, endothelial cell proliferation or endothelial tube formation in vitro or in vivo; or a pentapeptide having the generic sequence given in ABB79808, such as the present peptide, or its variant having an additional 1 to 4 amino acids comprising His, Pro or Gly at its Nor C-terminus. Also claimed are: chemically synthesised or recombinantly produced peptide multimers; a diagnostically or

multimer; a diagnostically useful HPRG-related composition, comprising the diagnostically labeled polypeptide, peptide or peptide multimer and a carrier; an antibody specific for an epitope of HPRG that is present in the HJP domain of human or rabbit HPRG, and which binds to HPRG or to any of the domains in a way which inhibits the anti-angiogenic activity of HPRG or the domains in a way which inhibits the anti-angiogenic activity of method for inhibiting call migration, cell invasion, cell proliferation or angiogenesis, a method for treating a consideration, provided in a subject; a method of subject having a disease or condition associated with undesired cell migration, proliferation, or angiogenesis; a method of stimulating or inhibiting angiogenesis in a subject; a method of etercting the presence of HPRG or its cleavage product or its peptide in a biological ample; isolated nucleic acids encoding the polypeptide, cell ample; isolated nucleic acids encoding the polypeptide, peptide or peptide multimer; an expression vector; transformed or transfected cells; a method of providing to a cell, tissue or organ and peptide multimer; an affinity ligand useful for the binding molecule, or the peptide multimer; an affinity ligand useful for binding to, or isolating, an HPRG-binding molecule, or isolating molecule, or isolating molecule, or isolating molecule, comprising the polypeptide, peptide or peptide compositions and methods are useful in diagnosing or treating a disease or condition associated with undestred cell migration, invasion, proliferation, or angiogenesis, such as cancer, atherosclerosis, diabetic compositions and methods are useful in inhibiting the growth of primary tumours or metastasces, and may also be used in treating neurodegenerative or elaboration of angiogenesis, and or condition associated with undestred cell migration, and in any and and an angional a ö peptide or peptide Gaps antiangiogenic receptor; rich glycoprotein; HPRG; cytostatic; antidiabetic; antiinflammatory; gynaecological; antiarthritic; rmatological; cardiant; vasotropic; vulnerary; e therapy; rabbit. iogenesis and are useful for promoting in pertinent disease states, and in various ; 0 100.0%; Score 36; DB 5; Length 5; 100.0%; Pred. ```
antiangiogenic receptor polypeptide or peptide, which is a is a fragment of a full-length native Tpm protein expressed on the surface of endothelial cells, or a variant of the fragment. It has a molecular mass of about 17 kDa and corresponds in its sequence to, or is a variant of, of about 17 kDa and corresponds in its sequence to, or is a variant of, or an internal fragment of a native Tpm isoform which is a binding site for antiangiogenic polypeptide or variant has substantially the same blochemical cotivity of binding to the antiangiogenic polypeptide agents, as does the native Tpm internal fragment. The antiangiogenic polypeptide agent that corrivity of binding to the antiangiogenic polypeptide agent that corrivity of binding to the antiangiogenic polypeptide agent that corrivity of binding to the antiangiogenic polypeptide or peptide is buman histline-proline critical glycoprotein (HPRG), rabbit HPRG, a Tpm-binding, antiangiogenic homologue, variant, domain or fragment of human or rabbit HPRG, two chain human kininogen (HK), the D5 domain of HK, or a Tpm-binding, the D5 domain or fragment of frhe HK or its D5 domain. The Tpm-related antiangiogenic receptor polypeptide or peptide, antibodies and compositions are useful for inhibiting endothelial cell migration, invasion, proliferation or angiogenesis, for inducing conditions in compositions are useful for inhibiting such propressis, or for treating tumours or cancer, diabetic endothelial cell appoptosis, or for treating diseases or conditions in which correased angiogenesis, or for treating diseases or conditions in which increased angiogenesis is desired, e.g. coronary artery disease or promoting wound healing, or for treating diseases or conditions in which increased angiogenesis is desired, e.g. coronary artery disease core fragment present in the rabbit HPRG protein His-Pro (H/P) rich domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                               New tropomyosin-related antiangiogenic receptor polypeptide, useful for inhibiting endothelial cell migration, invasion, proliferation or angiogenesis, inducing endothelial cell apoptosis, or treating tumors or cancer.
                                                                                                                                                                                                                                           The invention relates to an isolated tropomyosin (Tpm)-related antiangiogenic receptor polypeptide or peptide, which is a is a fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; foetal liver; gene expression; single exon nucleic acid probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;
